

RADIO STATIONS ABLE TO CONVERT TO DIGITAL IN EARLY 2009

Under the federal legislation, these are the radio stations able to convert to digital radio as part of the initial roll-out in early 2009.

These stations will be able to offer an entirely new listening experience, including the capacity for a second FM-style quality channel, pause and rewind, slideshows, Electronic Program Guides, extra detail-on-demand for advertised products, and much more. Each station will be choosing and designing features to best suit their respective audiences.
